

## GVS ELIPSE MASKS SIZES GUIDE

### Face Length

Distance from the bridge of your nose to the point of your chin

5.0" -5.4"	M/L	M/L	M/L
4.6" -5.0"	S/M	M/L	M/L
4.2" -4.6"	S/M	S/M	M/L
3.8" -4.2"	S/M	S/M	S/M

### Face Width

Distance between the Zygomatic Arches

4.7" -5.2"	5.2" -5.7"	5.7" -6.2"
---------------	---------------	---------------

Size Chart is a guide only. Correct sizing and fit must be qualified using either a quantitative or qualitative face fit test in accordance with National/Local regulations.

### Best Filter for Asbestos, Bacteria, Coal, Composite & Silica Dust, Pesticides, low-level Radioactive Material?

You can't do any better than a P100 rated filter — Note: the respirator's face seal is most important.

### Odor / Nuisance Filter — What Makes Them Different?

If organic and low-level petroleum based odors are a concern for you, while these smells won't harm you, if you simply want to filter out the smell or taste or their lingering memory ... the GVS SPR450 Combination Odor Nuisance P100 Filter with a layer of activated charcoal will filter most smells. Examples of these low-level nuisances include smells from paper mills, landfills, livestock, rotten organic matter, nail polish remover, permanent markers.

### Chemical Filtration

An all-in-one respirator that provides P100 plus chemical and eye protection is the GVS Respirator #SPR556 (3/4 Face Mask with Goggles.) The NIOSH and ANSI approved respirator *includes* the OV/AG/P100 Filter (#SPR474 - Organic Vapors, Acid Gases, P100.) Examples of chemical protection include: pesticides, paint vapors, cyclohexane, solvents, lead fumes, chlorine, formaldehyde, sulfuric acid (gas and powder only), hydrogen cyanide. **Filter Replacement:** Unlike the P100 filter, when chemical filters reach their capacity, the gases or vapors begin to leak through the cartridge to the user. This is called "breakthrough."

### When Do You Replace the Filter?

Simple! When you will no longer breath through it. **P100 filters are amazing!** They block all the floating air particles under the size of 0.3 micron from passing through and into our lungs. When the filter becomes full, they don't allow any leakage ... the filter simply becomes full which makes it more difficult to breath through the filter.

# GAS Elipse Half Mask Respirator

## — Advantages & Features vs. N95 Paper Dust Mask

(Besides HD, secure, durable, cloth straps vs. thin, glued-on rubber bands which break.)

**Fogging** — **No Fogging** +

**Leakage** — **Soft hypoallergenic TPE material** +

**Uncomfortable and Non-Adjustable** — **Fits to your face** +

**Low efficiency @ 95%, short filter life & disposable** — **HESPA High Efficiency (>99.99%) Reuseable and replaceable filters** +

**Pleated filter to reduce breathing resistance** +

**COST REDUCTION UP TO 50%**  
Using GVS Elipse instead of disposable respirator

Elipse Masks are available in two (2) sizes: S/M and M/L — See facial sizing chart.

# Elipse INTEGRA

Integra is tested and approved as one combined respiratory protection to NIOSH and ANSI. It is the only half mask approved with permanently fixed safety eyewear

## Maintaining Your Respirator

1. The only P100 *filter* that can be cleaned and re-used is the GVS Elipse *pleated* P100 (filter# SPR321); charcoal filters cannot. If appropriate, a charcoal filter can be re-used otherwise it has to be replaced. Cleaning the SPR321 is done by gently vacuuming the filter and using a damp cloth.
2. Cleaning or disinfecting the face piece is done with a mild detergent and warm water, rinsed and left to air dry. Respirators do require cleaning. Disposable wipes (without alcohol) are great to use in between uses.
3. Storage: What makes activated charcoal filters work as a P100 filter is their ability to attract and hold airborne molecules (like a magnetic). However, even if the respirator is not being used the activated charcoal is still attracting airborne particles. Therefore, to preserve the life of the charcoal filter, when it is not being used it must be *sealed* from exposure to dust, sunlight, heat, extreme cold, moisture, chemicals, fumes, etc. The GVS Elipse P100 Respirator, without the charcoal, can be left in the open air (i.e. on a work bench); a year later it'll still be good.

# USA

# Dust Guard

# Small, Comfortable - Durable GVS Elipse Respirators Dust & Chemical Filters

Div. of Scott Electric • 800-388-2232, #2403

Both models use the same P100 Filter  
(filters are re-useable & cleanable)

*Combination Eye & Respiratory Protection*

**P100 Filter - Pleated Water Resistant Synthetic Filter**  
Outlasts Charcoal Filters 50:1

*Half-Mask Respirator - fits under a Full Face Shield or Welding Mask*

*Combination Eye & Respiratory Protection*  
**Organic Vapors, Acid Gas Chemicals, P100 Synthetic Filter**

\* **P100 Filtration:** 99.97% or higher efficiency rating at 0.3 micron particle size. P100 is Amazing! You can't do any better than a P100 rated filter. Provides protection against dust, mist & fumes - silica, coal, grain & wood dust, asbestos, mold, glass & composite fibers, lead fumes, poultry, powders (dairy), spices, pharmaceutical powders, bacteria, viruses.

**UPGRADE 2020**  
YOUR RESPIRATOR IN  
**SWITCH TO GVS ELIPSE**

**GVS Half-mask ~ Same size as a Paper N95 Dust Mask**

**Superior Mask:** 100% Re-Useable, Cleanable, Replaceable (both the mask & Filter.) N95 is paper, disposable, 95% efficient & not for oil aerosols.

**Super Comfort:** soft, flexible thermoplastic mask provides all day comfort and the cloth, elastic straps provide a superior, comfortable seal to your face. The wide non-return valve in the center minimizes the user's breathing resistance and reduces fogging inside the goggles or glasses.

Half-Mask Respirator w P100 Filter					3/4 Goggle Respirator w P100 Filter				
SPR451	P100 Filters	S / M	1+	\$26.21	SPR549	P100 Filters	S / M	Price/Ea	\$52.00
